**Which plane divides the body into left and right sections?**

- Coronal
- Transverse
- Sagittal
- Oblique

**Which of the following terms are used to describe the position of body parts relative to each other?**

- Anterior
- Superior
- Proximal
- Distal

**Explain the significance of the standard anatomical position and how it aids in the use of anatomical terminology.**

**Which organ system includes the skin, hair, and nails?**

- Skeletal system
- Integumentary system
- Muscular system
- Nervous system

**Which of the following are considered major body cavities?**

- Cranial
- Thoracic
- Abdominal
- Nasal

**Describe the role of the sagittal plane in medical imaging and how it can be used to assess internal structures.**

**Which directional term describes a position closer to the surface of the body?**

- Deep
- Superficial
- Dorsal
- Ventral

**Which terms describe positions closer to the midline of the body?**

- Medial
- Lateral
- Proximal
- Distal

**Discuss how the understanding of body cavities is essential for surgical procedures.**

**Which organ system is primarily responsible for transporting nutrients and oxygen throughout the body?**

- Nervous system
- Cardiovascular system
- Respiratory system
- Digestives system

**Which of the following systems are involved in the regulation of body temperature?**

- Integumentary system
- Muscular system
- Endocrine system
- Skeletal system

**Analyze how the coronal plane can be used to differentiate between anterior and posterior body structures.**

**Which cavity contains the brain?**

- Thoracic cavity
- Cranio cavity
- Abdominal cavity
- Pelvic cavity

**Which organs are found within the thoracic cavity?**

- Heart
- Lungs
- Liver
- Stomach

**Evaluate the importance of directional terms in communicating medical information accurately.**

**Which plane divides the body into superior and inferior parts?**

- Sagittal
- Coronal
- Transverse
- Frontal

**Which of the following are functions of the muscular system?**

- Movement
- Heat production
- Blood filtration
- Hormone secretion

**Create a scenario where understanding the proximal and distal terms is crucial in a clinical setting.**

**Which directional term describes a position towards the back of the body?**

- Anterior
- Ventral
- Dorsal
- Inferior

**Which terms are used to describe a position further from the point of attachment or origin?**

- Distal
- Proximal
- Lateral
- Medial

**Discuss the interrelationship between the cardiovascular and respiratory systems in maintaining homeostasis.**

**Which organ system is responsible for hormone production and regulation?**

- Nervous system
- Endocrine system
- Cardiovascular system
- Respiratory system

**Which systems are primarily involved in waste elimination from the body?**

- Urinary system
- Digestive system
- Respiratory system
- Endocrine system

**Explain how understanding anatomical terminology can improve patient care and communication among healthcare professionals.**

**Which organ system is primarily responsible for defending against infection?**

- Nervous system
- Cardiovascular system
- Lymphatic system
- Digestives system

**Which of the following are part of the nervous system?**

- Brain
- Spinal cord
- Heart
- Nerves

**Analyze how anatomical planes are used in the design of exercise programs for physical rehabilitation.**
