Which perspective in psychology focuses on observable behavior?

- Cognitive
- Behavioral ✓**
- Humanist
- Psychoanalytic

The behaviorist perspective in psychology emphasizes the study of observable behavior rather than internal mental processes. This approach focuses on how behavior is learned and reinforced through interactions with the environment.

Who is considered the father of modern psychology?

- Sigmund Freud
- Carl Rogers
- Wilhelm Wundt ✓**
- William James

Wilhelm Wundt is widely recognized as the father of modern psychology due to his establishment of the first psychology laboratory in 1879, which marked the transition of psychology into a scientific discipline. His work laid the foundation for experimental psychology and the study of consciousness.

What is the primary goal of psychology?

- To entertain
- To describe, explain, predict, and control behavior ✓**
- To diagnose mental disorders
- To conduct experiments

The primary goal of psychology is to understand and explain behavior and mental processes, enabling individuals to improve their well-being and functioning. This involves studying various aspects of human experience, including emotions, thoughts, and social interactions.

Which of the following is NOT a goal of psychology?

- To predict behavior
- To control behavior
- To manipulate behavior ✓**
- To describe behavior

Psychology aims to understand, predict, and influence behavior and mental processes, but it does not aim to control individuals' actions against their will.

Which research method involves manipulating variables to determine cause and effect?

- Descriptive
- Correlational
- Experimental ✓**
- Observational

The research method that involves manipulating variables to determine cause and effect is known as an experimental method. This approach allows researchers to establish causal relationships by controlling and altering independent variables while observing the effects on dependent variables.

Describe how the biological perspective differs from the behavioral perspective in psychology.

The biological perspective differs from the behavioral perspective in that it examines the influence of biological factors on behavior, while the behavioral perspective focuses on learned behaviors and environmental stimuli.

Discuss the role of ethics in psychological research and why it is crucial.

Ethics play a vital role in psychological research by safeguarding participants' rights, ensuring informed consent, and preventing harm, which is essential for maintaining the integrity and credibility of the research process.

What contributions did Wilhelm Wundt make to the field of psychology?

Wilhelm Wundt contributed to psychology by founding the first experimental psychology laboratory, promoting the use of introspection, and establishing psychology as a distinct scientific discipline.

Which perspective emphasizes personal growth and self-fulfillment?

- Biological
- Humanist ✓**
- Behavioral
- Socio-cultural

The perspective that emphasizes personal growth and self-fulfillment is known as the humanist perspective. This approach focuses on individual potential and stresses the importance of self-actualization.

What are the ethical considerations in psychological research?

- Informed consent ✓**
- Confidentiality ✓**
- Deception without debriefing

Ethical treatment of participants ✓

Ethical considerations in psychological research include informed consent, confidentiality, the right to withdraw, minimizing harm, and ensuring the integrity of the research process.

Which research methods are typically used in psychology?

- Experimental ✓**
- Descriptive ✓**
- Correlational ✓**
- Anecdotal

Psychology employs a variety of research methods including experiments, surveys, observational studies, case studies, and correlational studies to understand behavior and mental processes.

Which of the following are goals of psychology?

- Describe behavior ✓**
- Explain behavior ✓**
- Predict behavior ✓**
- Entertain behavior

The primary goals of psychology include understanding, predicting, and influencing behavior and mental processes. These goals help psychologists to study and address various aspects of human experience.

Which of the following are considered major perspectives in psychology?

- Biological ✓**
- Behavioral ✓**
- Astrological
- Cognitive ✓**

Major perspectives in psychology include behavioral, cognitive, humanist, psychodynamic, biological, and sociocultural approaches. Each perspective offers a different lens through which to understand human behavior and mental processes.

Identify and explain one key difference between the psychoanalytic and humanist perspectives.

One key difference is that the psychoanalytic perspective emphasizes the role of unconscious processes and childhood experiences in shaping behavior, whereas the humanist perspective focuses on conscious experiences and the inherent potential for personal growth.

Who developed the theory of psychoanalysis?

- John B. Watson
- Carl Rogers
- Sigmund Freud ✓
- Abraham Maslow

The theory of psychoanalysis was developed by Sigmund Freud, who introduced concepts such as the unconscious mind, defense mechanisms, and the significance of childhood experiences in shaping personality.

Which concepts are associated with the socio-cultural perspective?

- Cultural norms ✓
- Social influence ✓
- Biological processes
- Evolutionary adaptation

The socio-cultural perspective emphasizes the influence of social interactions, cultural norms, and societal structures on individual behavior and development. Key concepts include socialization, cultural context, and the role of community in shaping identity.

What does the cognitive perspective in psychology primarily study?

- Genetics
- Mental processes ✓
- Social influences
- Evolutionary traits

The cognitive perspective in psychology primarily studies mental processes such as perception, memory, thinking, and problem-solving. It focuses on how people understand, diagnose, and solve problems, emphasizing the role of internal mental states.

Which figures are associated with the development of humanism?

- Carl Rogers ✓**
- Abraham Maslow ✓**
- Sigmund Freud
- John B. Watson

Humanism, a cultural and intellectual movement of the Renaissance, is primarily associated with figures such as Petrarch, Erasmus, and Leonardo da Vinci, who emphasized the value of human potential and achievements.

Explain the importance of the scientific method in psychological research.

The scientific method is important in psychological research because it establishes a structured framework for investigating hypotheses, collecting data, and analyzing results, which enhances the credibility and accuracy of psychological findings.

How does the cognitive perspective approach the study of mental processes?

The cognitive perspective approaches the study of mental processes by examining how individuals process information, make decisions, and solve problems, often using models and theories to explain these cognitive functions.
