Please consult your teacher if you're unsure about your solution or think there might have been a mistake. Or reach out directly to the StudyBlaze team at max@studyblaze.io.*

What is the primary purpose of the pooling layer in a CNN?

- ◯ To increase the dimensionality of the feature maps
- ◯ To reduce the dimensionality of the feature maps
- ◯ To apply activation functions
- ◯ To perform convolutions

Which of the following are components of a Convolutional Neural Network (CNN)?

- ☐ Convolutional Layer
- ☐ Recurrent Layer
- ☐ Pooling Layer
- ☐ Fully Connected Layer

Explain how the convolutional layer in a CNN extracts features from input data. Include the role of filters/kernels in your explanation.

Which optimization algorithm is known for its adaptive learning rate and is commonly used in training CNNs?

- ◯ Stochastic Gradient Descent (SGD)
- ◯ Adam
- ◯ Momentum
- ◯ AdaGrad

Which activation functions are commonly used in CNNs?

- [ ] ReLU (Rectified Linear Unit)
- [ ] Softmax
- [ ] Sigmoid
- [ ] Tanh

Discuss the role of backpropagation in training a CNN. How does it contribute to the model's learning process?

What is the main advantage of using CNNs for image processing tasks?

- ◯ They require less data for training
- ◯ They are computationally inexpensive
- ◯ They automatically detect important features without manual intervention
- ◯ They have a simple architecture

What are some regularization techniques used to prevent overfitting in CNNs?

- [ ] Dropout
- [ ] Batch Normalization
- [ ] L2 Regularization
- [ ] Data Augmentation

Describe how dropout works as a regularization technique in CNNs. Why is it effective in preventing overfitting?

Which layer in a CNN is typically responsible for the final classification or output?

- ◯ Convolutional Layer
- ◯ Pooling Layer
- ◯ Fully Connected Layer
- ◯ Input Layer

In which domains, other than image processing, are CNNs applied?

- ☐ Video Processing
- ☐ Natural Language Processing
- ☐ Financial Forecasts
- ☐ Weather Prediction

Analyze the impact of using different pooling methods (max pooling vs. average pooling) on the performance of a CNN.

Which type of pooling is most commonly used in CNNs to retain important features?

- ◯ Average PoolING
- ◯ Max PoolING
- ◯ Min PoolING
- ◯ Global PoolING

Which of the following are challenges associated with using CNNs?

- [ ] High computational complexity
- [ ] Requirement for large datasets
- [ ] Difficulty in interpreting model decisions
- [ ] Limited to only image data

Evaluate the importance of using a diverse dataset when training a CNN. How does it affect the model's generalization ability?

What is the function of an activation function in a CNN?

- ◯ To perform dimensionality reduction
- ◯ To introduce non-linearity into the model
- ◯ To connect layers
- ◯ To perform convolutions

Which techniques can be used to optimize the training of CNNs?

- [ ] Learning Rate Scheduling
- [ ] Data Augmentation
- [ ] Gradient Clipping
- [ ] Hyperparameter Tuning

Critically analyze the role of fully connected layers in CNNs. How do they differ from convolutional and pooling layers in terms of functionality?

Which of the following is a key characteristic of the ReLU activation function?

- ◯ It outputs values between 0 and 1
- ◯ It is computationally expensive
- ◯ It introduces non-linearity by outputting zero for negative inputs
- ◯ It is used only in the output layer

Which factors can influence the performance of a CNN?

- ☐ Size of the dataset
- ☐ Choice of activation function
- ☐ Number of layers
- ☐ Type of pooling used

Discuss the significance of using different activation functions in CNNs. How do they impact the model's performance and learning capability?

What is the primary reason for using dropout in CNNs?

- ◯ To increase the training speed
- ◯ To prevent overfitting
- ◯ To enhance feature extraction
- ◯ To simplify the model architecture

Which of the following are true about the convolutional layer in a CNN?

- ☐ It uses filters to scan the input data
- ☐ It reduces the size of the input data
- ☐ It outputs feature maps
- ☐ It is always followed by a pooling layer

Analyze the trade-offs involved in increasing the depth of a CNN. What are the potential benefits and drawbacks?
