Which of the following are parts of the small intestine?

- Duodenum
- Jejunum
- Ilium
- Cecum

Which organ produces bile?

- Pancreas
- Liver
- Gallbladder
- Stomach

Which quadrant of the abdomen contains the liver?

- Right Upper Quadrant (RUQ)
- Left Upper Quadrant (LUQ)
- Right Lower Quadrant (RLQ)
- Left Lower Quadrant (LLQ)

Which organ is primarily responsible for nutrient absorption?

- Stomach
- Esophagus
- Small Intestine
- Large Intestine

Which of the following is not part of the large intestine?

- Cecum
- Ilium

- Colon
- Rectum

Discuss how the structure of the small intestine facilitates its function in nutrient absorption.

What is the main function of the gallbladder?

- Produces digestive enzymes
- Stores and concentrates bile
- Absorbs nutrients
- Secretes insulin

Identify and explain two common disorders of the digestive system and their impact on digestion.

Which of the following are symptoms of GERD?

- Heartburn
- Nausea
- Constipation
- Acid reflux

Explain the process of peristalsis and its importance in the digestive system.

What are the potential consequences of a malfunctioning ileocecal valve?

What is the role of the pyloric sphincter?

- Prevents acid reflux
- Controls food passage from stomach to small intestine
- Absorbs nutrients
- Produces digestive enzymes

Which organs are considered accessory organs of the digestive system?

- Liver
- Stomach
- Gallbladder
- Pancreas

Describe the role of bile in digestion and how it aids in the absorption of fats.

Which of the following are functions of the pancreas?

- Produces bile
- Secretes insulin
- Produces digestive enzymes
- Absorbs nutrients

Which organs are involved in the mechanical digestion of food?

- Teeth
- Stomach
- Liver
- Small Intestine

What is the main function of the stomach?

- Absorb water
- Produce bile
- Store food
- Mix food with acid and enzymes

Which part of the digestive system connects the throat to the stomach?

- Trachea
- Duodenum
- Esophagus
- Colon

What are the main functions of the large intestine?

- Absorb water
- Form feces
- Digest proteins
- Store bile

How does the anatomy of the digestive system change from the oral cavity to the rectum, and what are the functional implications of these changes?
