What is the main reason for the global shift towards renewable energy?

- Cost reduction
- Resource abundance
- Environmental sustainability
- Technological simplicity

Which sector is the largest consumer of fossil fuels?

- Agriculture
- Transportation
- Healthcare
- Education

Which of the following is NOT a type of fossil fuel?

- Coal
- Natural Gas
- Solar
- Oil

Explain how fossil fuels are formed and identify the main elements involved in their composition.

Which of the following are considered fossil fuels? (Select all that apply)

- Coal
- Wind
- Oil
- Solar

Which of the following are renewable energy sources? (Select all that apply)

- Solar
- Natural Gas
- Wind
- Coal

Which historical period saw a significant increase in fossil fuel use?

- Renaissance
- Industrial Revolution
- Middle Ages
- Information Age

Discuss the role of fossil fuels in the global economy and their impact on job creation.

Which fossil fuel is most commonly used for electricity generation?

- Oil
- Coal
- Natural Gas
- Biomass

What process primarily contributes to the formation of fossil fuels?

- Photosynthesis
- Anaerobic decomposition
- Evaporation

CombustION

Analyze the future outlook for fossil fuels in the context of technological innovation and market trends.

What are some of the environmental consequences of fossil fuel extraction? (Select all that apply)

- Habitat destruction
- Air pollution
- Increased biodiversity
- Water contamination

Which international agreements aim to reduce fossil fuel consumption? (Select all that apply)

- Kyoto Protocol
- Paris Agreement
- Geneva Convention
- Montreal Protocol

What technological advancements have improved fossil fuel extraction? (Select all that apply)

- Hydraulic fracturing
- Carbon capture and storage
- Wind turbines
- Horizontal drilling

What are the key challenges faced by governments in regulating fossil fuel use, and how might these be addressed?

Compare and contrast fossil fuels with renewable energy sources in terms of sustainability and environmental impact.

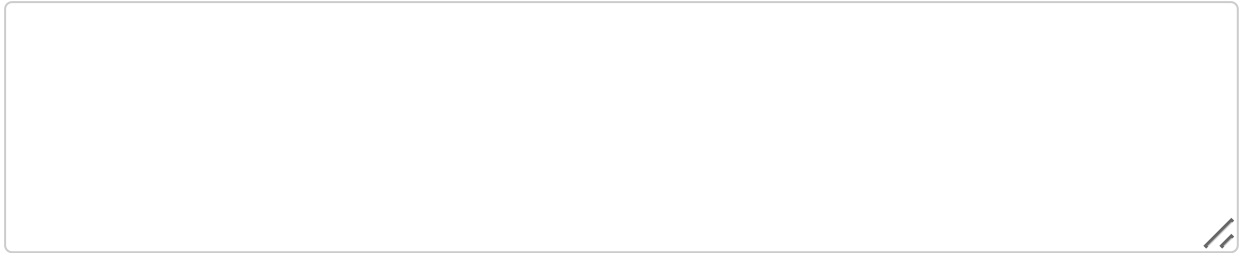

What are some challenges associated with fossil fuels? (Select all that apply)

- Resource depletion
- High carbon emissions
- Unlimited supply
- Environmental activism

What is the primary component of fossil fuels?

- Nitrogen
- Oxygen
- Carbon
- Sulfur

Describe the environmental impacts of fossil fuel consumption and suggest potential solutions to mitigate these effects.

What is a major environmental impact of burning fossil fuels?

- Increased biodiversity
- Soil erosion
- Carbon dioxide emissions
- Water purification
