**What is the primary function of the seminal vesicles?**

- Store sperm
- Produce seminal fluid
- Transport sperm
- Produce testosterone

**Which of the following structures are directly involved in the production and maturation of sperm?**

- Testes
- Vas Deferens
- Prostate Glands
- Epididymis

**Explain the process of spermatogenesis and the role of hormones in regulating this process.**

**Which part of the male reproductive system is responsible for the expulsion of urine and semen?**

- Testes
- Penis
- Prostate Glands
- Epididymis

**Which hormones are primarily involved in the regulation of the male reproductive system?**

- Estrogen
- Luteinizing Hormone (LH)
- Follicular Stimulating Hormone (FSH)
- Testosterone

**Discuss the potential impact of lifestyle choices on male reproductive health and suggest preventative measures.**

**What is the main function of the prostate gland?**

- Store sperm
- Produce testosterone
- Transport sperm
- Secrete prostate fluid

**Which of the following are common disorders of the male reproductive system?**

- Erectile Dysfunction
- Prostate Cancer
- Testicular Cancer
- Ovarian Cysts

**Describe the symptoms and diagnostic methods for detecting prostate cancer.**

**What is the role of the epididymis in the male reproductive system?**

- Produce sperm
- Secrete hormones
- Produce seminal fluid
- Store and mature sperm

**Which structures are part of the pathway for sperm transport?**

- Epididymis
- Urethra
- Seminal Vesicles
- Vas Deferens

**Analyze the importance of regular check-ups in maintaining male reproductive health and preventing disorders.**

**Which hormone is primarily responsible for the development of male secondary sexual characteristics?**

- Estrogen
- Testosterone
- Oxytocin
- Progesterone

**Which of the following are components of semen?**

- Sperm
- Seminal Fluid
- Urine
- Prostate Fluid

**Evaluate the significance of hormonal balance in the male reproductive system and its effects on overall health.**

**What is the primary site of testosterone production in males?**

- Prostate Glands
- Testes
- Epididymis
- Seminal Vesicles

**Which of the following processes are involved in ejaculation?**

- Spermatogenesis
- Secretion of seminal fluid
- Expulsion of semen
- Contraction of the vas deferens

**Discuss the relationship between age and the risk of developing male reproductive disorders.**

**Which structure is responsible for transporting sperm from the epididymis to the ejaculatory ducts?**

- Urethra
- Vas Deferens
- Seminal Vesicles
- Prostate Glands

**Which lifestyle factors can negatively impact male reproductive health?**

- Smoking
- Excess alcohol consumption
- Regular exercise
- Balanced diet

**Explain how the male reproductive system interacts with other body systems to maintain homeostasis.**

**Which process describes the production of sperm in the testes?**

- Oogenesis
- Spermatogenesis
- Fertilization
- Menstruation

**Which of the following are functions of testosterone in the male body?**

- Regulate sperm production
- Develop secondary sexual characteristics
- Produce estrogen
- Increase bone density

**Critically evaluate the role of medical advancements in the diagnosis and treatment of male reproductive disorders.**

**Which of the following are part of the male reproductive system's external structures?**

- Testes
- Penis
- Prostate Glands
- Scrotum

**Which of the following are involved in the hormonal regulation of the male reproductive system?**

- Pituitary Glands
- Hypothalamus
- Adrenal Glands
- Thyroid Glands

**Analyze the potential consequences of untreated male reproductive disorders on overall health and quality of life.**
