**Which of the following are true about the alveoli?**

- They are the site of gas exchange
- They produce mucus
- They are surrounded by capillaries
- They are part of the upper respiratory tract

**Which of the following are part of the upper respiratory tract?**

- Nose
- Larynx
- Trachea
- Pharynx

**Explain the process of gas exchange in the alveoli and the role of hemoglobin in this process.**

**Explain how the diaphragm contributes to the process of inhalation.**

**Describe the role of the medulla oblongata in regulating breathing.**

**Discuss the impact of high altitude on the respiratory system and how the body adapts.**

**What are the main differences between asthma and COPD in terms of symptoms and causes?**

**How does smoking affect the respiratory system, and what are the potential long-term consequences?**

**Which part of the brain is primarily responsible for regulating breathing?**

- C cerebellum
- Medulla oblongata
- Hypothalamus
- Thalamus

**What is the primary muscle involved in the process of inhalation?**

- Intercostal muscles
- Diaphragm
- Abdominal muscles
- Pectoral muscles

**Which of the following is a common symptom of asthma?**

- High fever
- Joint pain
- Shortness of breath
- Skin rash

**What is the role of hemoglobin in the respiratory system?**

- To produce red blood cells
- To transport oxygen
- To digest food
- To fight infections

**Which structure is responsible for filtering, warming, and humidifying the air we breathe?**

- Larynx
- Trachea
- Nose and nasal cavity

Alveoli

**Which condition is characterized by the destruction of alveoli, leading to breathing difficulties?**

- Asthma
- Emphysema
- Pneumonia
- Tuberculosis

**Which structure connects the larynx to the bronchi?**

- Pharynx
- Trachea
- Esophagus
- Bronchioles

**What is the primary function of the alveoli?**

- Produce mucus
- Exchange gases
- Filter dust particles
- Generate sound

**Which diseases are classified under Chronic Obstructive Pulmonary Disease (COPD)?**

- Asthma
- Emphysema
- Chronic bronchitis
- Pneumonia

**What are the functions of the respiratory system?**

- Supply oxygen to the blood
- Remove carbon dioxide from the body
- Produce hormones
- Maintain acid-base balance

**Which of the following are preventive measures for maintaining respiratory health?**

- Smoking cessation

- Regular exercise
- AvoidING air pollutants
- High sugar diet

**What changes occur in the respiratory system during exercise?**

- Increased oxygen demand
- Decreased heart rate
- Increased breathing rate
- Decreased lung capacity
