What is the unit of specific heat in the International System of Units (SI)?

- J/kg
- J/g°C
- cal/g
- J/mol

Explain why water's high specific heat is beneficial for aquatic life.

Describe a real-world scenario where specific heat is an important consideration in engineering.

How does specific heat relate to the concept of thermal equilibrium?

Why is it important to know the specific heat of a material when designing a heating system?

Discuss how specific heat affects the climate of coastal regions compared to inland areas.

Which of the following substances has a high specific heat capacity?

- Iron
- Aluminum
- Water
- Copper

Which material would heat up fastest when the same amount of heat is applied?

- Water
- Sand
- Iron
- Air

What is the specific heat capacity of water?

- 2.1 J/g°C
- 4.18 J/g°C
- 0.9 J/g°C
- 3.8 J/g°C

Specific heat is defined as the amount of heat required to raise the temperature of:

- One mole of a substance by one degree Celsius
- One gram of a substance by one degree Celsius
- One kilogram of a substance by one degree Celsius
- One liter of a substance by one degree Celsius

Which of the following is NOT a factor in the specific heat formula $Q = mc\Delta T$?

- Mass
- Temperature change
- Volume
- Specific heat capacity

Specific heat is an important concept in which field of study?

- Biology
- Thermodynamics
- Geology
- Astronomy

In the formula $Q = mc\Delta T$, what does 'm' represent?

- Mass of the substance
- molar mass
- molecular weight
- moles of the substance

Which of the following processes involve specific heat calculations? (Select all that apply)

- Melting ice
- Boiling water
- Freezing water

- Evaporating alcohol

Which statements are true regarding substances with low specific heat? (Select all that apply)

- They heat up quickly.
 They cool down slowly.
 They require less energy to change temperature.
 They are always metals.

Provide an example of a calorimetry experiment and explain how specific heat is used to determine the heat change.

What are the consequences of water's high specific heat in nature? (Select all that apply)

- Stable climate
 Rapid temperature changes
 Heat regulation in organisms
 Increased evaporation rates

Which of the following are applications of specific heat? (Select all that apply)

- Designs thermal systems
 Weather prediction
 Cooking
 Photography

Which of the following are true about specific heat? (Select all that apply)

- It is a measure of a substance's ability to store heat.
 It is constant for all substances.
 It varies with temperature and pressure.
 It is higher for metals than for water.

In calorimetry, which factors are crucial for calculating heat transfer? (Select all that apply)

- Mass of the substance
- Specific heat capacity
- Initial temperature
- Color of the substance
