Which bone is known as the largest bone in the arm?

- Radius
- Ulna
- Humerus
- Clavicle

What type of joint is the elbow joint?

- Ball-and-socket joint
- Hinge joint
- Pivot joint
- Saddle joint

Which vein is commonly used for venipuncture?

- Cephalic vein
- Basilic vein
- Median cubital vein
- Radical vein

Which nerve is commonly associated with carpal tunnel syndrome?

- Ulnar nerve
- Radical nerve
- Median nerve
- Axillary nerve

What movements are possible at the shoulder joint?

- Flexation
- Extension

- Abduction
- Pronation

Which bones are involved in forming the wrist joint?

- Radius
- Ulna
- Carpal bones
- Metacarpals

Outline the blood supply to the hand, starting from the brachial artery.

Explain the difference between the intrinsic and extrinsic muscles of the hand and their respective functions.

Which nerves originate from the brachial plexus?

- Median nerve
- Ulnar nerve
- Radial nerve
- Sciatic nerve

Which muscles are part of the forearm's flexor group?

- Flexor carpi radialis

- Extensor carpi radialis
- Flexor digitorum superficialis
- Brachioradialis

Which artery is the main arterial supply to the arm?

- Subclavian artery
- Brachial artery
- Radial artery
- Ulnar artery

Which muscle is responsible for extending the elbow?

- Biceps brachii
- Triceps brachii
- Brachialis
- Deltoid

Describe the anatomical position of the scapula and its importance in shoulder movement.

Which bone forms the lateral aspect of the forearm?

- Ulna
- Radius
- Humerus
- Scapula

Describe the structure and function of the glenohumeral joint and its range of motion.

Which of the following are part of the rotator cuff muscles?

- Supraspinatus
- Infraspinatus
- Teres minor
- Subscapularis
- Deltoid

Discuss the clinical significance of the ulnar nerve and the symptoms associated with its injury.

Explain the role of the biceps brachii in forearm movements and identify its origin and insertion points.

Which of the following are carpal bones?

- Scaphoid
- Lunate
- Trapezium

Metacarpal

What is the primary function of the deltoid muscle?

- Flex the elbow
- Extend the wrist
- Abduct the arm
- Rotate the forearm
