- Inhalation of airborne particles
- Needlestick injuries
- Contact with intact skin
- Mucos membrane exposure

**Discuss the importance of personal protective equipment (PPE) in the workplace and provide examples of PPE used to prevent exposure to bloodborne pathogens.**

**Which virus is known for causing immune system deterioration?**

- Hepatitis B virus (HBV)
- Human Immunodeficiency Virus (HIV)
- Hepatitis C virus (HCV)
- Influenza virus

**Which actions are part of an effective post-exposure protocol?**

- Ignoring minor exposures
- Immediate washing of the exposed area
- Reporting the incident
- Seeking medical evaluation

**Evaluate the impact of OSHA regulations on workplace safety concerning bloodborne pathogens. What are the key components of these regulations?**

**Which of the following symptoms is commonly associated with hepatitis infection?**

- Jaundice
- Skin rash
- Headache
- Shortness of breath

**What are some preventive measures to reduce the risk of bloodborne pathogen transmission?**

- Wearing gloves and masks
- Reusing disposable sharps
- Implementating universal precautions
- Proper disposal of sharps

**Describe the role of training and education in preventing bloodborne pathogen exposure in the workplace. How can employers ensure that training is effective?**

**What is the main goal of post-exposure prophylaxis (PEP)?**

- To prevent infection after exposure
- To treat existing infections
- To enhance immune response
- To provide long-term immunity
