What is the purpose of Azure?

Azure is a cloud computing service created by Microsoft for building, testing, deploying, and managing applications and services through Microsoft-managed data centers.

What are the main types of cloud services offered by Azure?

The main types of cloud services offered by Azure are Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS).

What is the Azure portal?

The Azure portal is a web-based application that provides a unified console for managing Azure services and resources.

What is Azure Resource Manager?

Azure Resource Manager is a management framework that allows you to create, update, and delete resources in your Azure account.

What is a resource group in Azure?

A resource group is a container that holds related resources for an Azure solution.

What is the difference between IaaS, PaaS, and SaaS?

IaaS provides virtualized computing resources over the internet, PaaS provides a platform allowing customers to develop, run, and manage applications without the complexity of building and maintaining the infrastructure, and SaaS delivers software applications over the internet on a subscription basis.

What is Azure's pricing calculator?

The Azure pricing calculator is a tool that helps you estimate the cost of using Azure services.

What is Azure Active Directory?

Azure Active Directory is a cloud-based identity and access management service from Microsoft.

What is the purpose of Azure's compliance offerings?

Azure's compliance offerings help organizations meet regulatory requirements and industry standards.

What is a virtual machine in Azure?

A virtual machine in Azure is an on-demand, scalable computing resource that provides the same functionality as a physical computer.
