Part 1: Building a Foundation

Which of the following is a mammal?

Hint: Think about the characteristics of mammals.

- A) Crocodile
- B) Eagle
- C) Dolphin
- D) Shark

Which of the following animals are typically found in a desert habitat? (Select all that apply)

Hint: Consider animals that are adapted to dry environments.

- A) Camel
- B) Penguin
- C) Scorpion
- D) Polar Bear

List three characteristics that are common to all birds.

Hint: Think about what defines a bird.

Provide the Spanish translation for the following animals: Dog, Cat, Elephant.

Hint: Think about the common names for these animals in Spanish.

1. Dog

2. Cat

3. Elephant

Part 2: Understanding and Interpretation

What is the primary reason some animals migrate?

Hint: Consider the needs of animals in different seasons.

- A) To find new habitats
- B) To escape predators
- C) To find food and better climate
- D) To reproduce

Which of the following are characteristics of reptiles? (Select all that apply)

Hint: Think about the traits that define reptiles.

- A) Warm-bloodied
- B) Lay eggs
- C) Have scales
- D) Live in water

Explain why amphibians are unique in their ability to live both in water and on land.

Hint: Consider their life cycle and physical adaptations.

Part 3: Application and Analysis

If a polar bear is moved to a tropical rainforest, what is the most likely outcome?

Hint: Think about the polar bear's natural habitat and needs.

- A) It will thrive due to abundant food
- B) It will struggle due to the heat
- C) It will adapt quickly
- D) It will become nocturnal

How can conservation efforts help endangered species? (Select all that apply)

Hint: Consider the various strategies used in conservation.

- A) Protect natural habitats
- B) Banning hunting
- C) Increasing urban development
- D) Establish breeding programs

Describe how a fish's gills function to allow it to breathe underwater.

Hint: Think about the process of gas exchange in water.

Which of the following relationships is an example of mutualism?

Hint: Consider the interactions between different species.

- A) Lion and zebra
- B) Bee and flower
- C) Cat and mouse
- D) Shark and fish

Analyze the following scenarios and identify which involve animals adapting to their environment. (Select all that apply)

Hint: Think about how animals change their behavior or characteristics.

- A) A bear hibernating in winter
- B) A chameleon changing color
- C) A bird flying south for the winter
- D) A fish swimming upstream

Compare and contrast the habitats of a rainforest and a desert, focusing on how animals have adapted to each environment.

Hint: Consider the climate, vegetation, and animal adaptations.

Part 4: Evaluation and Creation

Which conservation strategy is most effective for protecting marine life?

Hint: Think about the methods used to safeguard ocean ecosystems.

- A) Building more aquariums
- B) Establish marine protected areas
- C) Increasing fishing quotas
- D) Introducing non-native species

Evaluate the following statements and identify which are true about the impact of deforestation on animal habitats. (Select all that apply)

Hint: Consider the consequences of habitat loss.

- A) It leads to loss of biodiversity
- B) It creates more space for urban development
- C) It disrupts food chains
- D) It increases animal populations

Design a conservation plan for an endangered species of your choice. Include strategies for habitat protection, breeding programs, and community involvement.

Hint: Think about the steps needed to ensure the species' survival.
