What is Applied Behavior Analysis (ABA)?

Applied Behavior Analysis (ABA) is a scientific approach to understanding behavior and how it is affected by the environment.

What are the four functions of behavior in ABA?

The four functions of behavior in ABA are: attention, escape, access to tangibles, and sensory stimulation.

What is reinforcement in the context of ABA?

Reinforcement is a consequence that increases the likelihood of a behavior being repeated.

What is the difference between positive and negative reinforcement?

Positive reinforcement involves adding a stimulus to increase a behavior, while negative reinforcement involves removing a stimulus to increase a behavior.

What is punishment in ABA?

Punishment is a consequence that decreases the likelihood of a behavior being repeated.

What are the two types of punishment?

The two types of punishment are positive punishment, which adds a stimulus to decrease a behavior, and negative punishment, which removes a stimulus to decrease a behavior.

What is a behavior intervention plan (BIP)?

A behavior intervention plan (BIP) is a plan that outlines strategies to address specific behaviors and promote positive behavior change.

What is the role of data collection in ABA?

Data collection in ABA is essential for measuring behavior, evaluating the effectiveness of interventions, and making informed decisions.

What is a functional behavior assessment (FBA)?

A functional behavior assessment (FBA) is a process used to identify the purpose or function of a behavior in order to develop effective interventions.
