What is a digraph?

A digraph is a combination of two letters that together represent one sound.

Can you give an example of a digraph?

An example of a digraph is 'ch' as in 'chair'.

What are the two types of digraphs?

The two types of digraphs are consonant digraphs and vowel digraphs.

What is a consonant digraph?

A consonant digraph is a pair of consonants that together make one sound, such as 'sh' in 'ship'.

What is a vowel digraph?

A vowel digraph is a pair of vowels that together make one sound, such as 'ea' in 'bread'.

What is the purpose of using digraphs in reading?

Digraphs help in decoding words and improving reading fluency.

How do digraphs differ from blends?

Digraphs represent a single sound, while blends are combinations of sounds where each letter retains its sound.

What is an example of a blend?

An example of a blend is 'st' in 'stop'.

Why are digraphs important in phonics?

Digraphs are important in phonics because they help students understand how letters work together to form sounds.

What is the digraph in the word 'phone'?

The digraph in the word 'phone' is 'ph', which represents the 'f' sound.
