What is a dinosaur?

A dinosaur is a type of reptile that lived during the Mesozoic Era, which is known as the age of reptiles.

When did dinosaurs first appear?

Dinosaurs first appeared during the Triassic period, approximately 230 million years ago.

What are the three main periods of the Mesozoic Era?

The three main periods of the Mesozoic Era are the Triassic, Jurassic, and Cretaceous periods.

What is the largest dinosaur known?

The largest dinosaur known is Argentinosaurus, which could reach lengths of over 100 feet.

What did dinosaurs eat?

Dinosaurs had varied diets; some were herbivores, eating plants, while others were carnivores, eating other animals.

How did dinosaurs go extinct?

Dinosaurs went extinct about 65 million years ago, likely due to a combination of volcanic activity, climate change, and an asteroid impact.

What is a theropod?

A theropod is a group of bipedal dinosaurs that includes modern birds and well-known species like Tyrannosaurus rex.

What is the difference between an herbivore and a carnivore?

Herivores are animals that primarily eat plants, while carnivores are animals that primarily eat other animals.

What is a fossil?

A fossil is the preserved remains or traces of a once-living organism, often found in sedimentary rock.

What is paleontology?

Paleontology is the scientific study of the history of life on Earth through the examination of plant and animal fossils.
