## Part 1: Building a Foundation

---

**Which of the following symbols is used to denote congruence between triangles?**

undefined.  $\approx$

**undefined.  $\cong$  ✓**

undefined.  $=$

undefined.  $\sim$

The correct symbol for congruence is  $\cong$ .

**Which of the following are criteria for triangle congruence? (Select all that apply)**

**undefined. SSS ✓**

**undefined. SAS ✓**

**undefined. ASA ✓**

undefined. SSA

The criteria for triangle congruence include SSS, SAS, and ASA.

**Explain what it means for two triangles to be congruent.**

**Two triangles are congruent if they have the same size and shape, meaning all corresponding sides and angles are equal.**

**What does CPCTC stand for in geometry?**

undefined. Correspondingly Parts of Congruent Triangles are Congruent

undefined. Congruent Parts of Correspondingly Triangles are Congruent

**undefined. Correspondence Parts of Congruent Triangles are Congruent ✓**

undefined. Congruent Parts of Correspondingly Triangles are Complementary

CPCTC stands for Correspondence Parts of Congruent Triangles are Congruent.

## Part 2: comprehension and Application

---

**Which postulate would you use to prove two triangles congruent if you know two sides and the included angle are equal?**

undefined. SSS

**undefined. SAS ✓**

undefined. ASA

undefined. AAS

The SAS postulate is used when two sides and the included angle are known to be equal.

**Which of the following statements are true about congruent triangles? (Select all that apply)**

**undefined. All corresponding angles are equal. ✓**

**undefined. All corresponding sides are equal. ✓**

**undefined. The triangles must be the same size and shape. ✓**

undefined. They must have the same area.

All corresponding angles and sides are equal, and the triangles must be the same size and shape.

**Describe how the HL theorem is used to prove congruence in right triangles.**

**The HL theorem states that if the hypotenuse and one leg of a right triangle are equal to the hypotenuse and one leg of another right triangle, then the triangles are congruent.**

**You are given two triangles where two angles and a non-included side are congruent. Which theorem or postulate can you use to prove the triangles are congruent?**

undefined. SSS

undefined. SAS

undefined. ASA

**undefined. AAS ✓**

The AAS theorem can be used when two angles and a non-included side are known to be congruent.

In a geometric proof, which of the following steps might you take to prove two triangles are congruent using the ASA postulate? (Select all that apply)

undefined. Identify two pairs of congruent angles. ✓

undefined. Identify a pair of congruent sides between the angles. ✓

undefined. Identify a pair of congruent sides not between the angles.

undefined. Identify two pairs of congruent sides.

To prove congruence using ASA, you would identify two pairs of congruent angles and a pair of congruent sides between the angles.

Given a parallelogram, explain how you would prove that the opposite triangles are congruent.

To prove the opposite triangles in a parallelogram are congruent, you can show that they share a side and have two pairs of equal angles.

### Part 3: Analysis, Evaluation, and Creation

---

Which of the following are necessary steps in a two-column proof? (Select all that apply)

undefined. State the given information. ✓

undefined. Draw a diagram. ✓

undefined. List statements and reasons. ✓

undefined. Conclude with the proof statement. ✓

Necessary steps in a two-column proof include stating the given information, listing statements and reasons, and concluding with the proof statement.

Analyze the role of the transitive property in proving triangle congruence. Provide an example.

The transitive property states that if triangle A is congruent to triangle B, and triangle B is congruent to triangle C, then triangle A is congruent to triangle C. An example would be if two triangles share a common side and are both congruent to a third triangle.

Which method of proof is best suited for visually demonstrating the logical flow of proving triangle congruence?

undefined. Two-column proof

**undefined. Flowchart proof ✓**

undefined. Paragraph proof

undefined. Indirect proof

A flowchart proof is best suited for visually demonstrating the logical flow of proving triangle congruence.

**When evaluating a proof for congruent triangles, which of the following criteria should be met? (Select all that apply)**

**undefined. Logical sequence of statements ✓****undefined. Correct application of congruence postulates ✓****undefined. Clear and concise reasoning ✓**

undefined. Use of multiple methods of proof

Criteria for evaluating a proof for congruent triangles include a logical sequence of statements, correct application of congruence postulates, and clear reasoning.

**Create a real-world scenario where proving triangle congruence is essential. Describe the scenario and outline the steps you would take to prove congruence.**

**A real-world scenario could involve construction, where proving that two triangular supports are congruent ensures stability. Steps would include measuring sides and angles and applying congruence criteria.**
