Part 1: Building a Foundation

What is the line at 0 degrees latitude called?

Hint: Think about the main line that divides the Earth into the Northern and Southern Hemispheres.

- Prime Meridian
- Equator
- Tropic of Cancer
- Arctic Circle

Which of the following are true about longitude lines?

Hint: Consider how longitude lines are oriented and what they measure.

- They run vertically.
- They measure distance east or west of the Prime Meridian.
- They are parallel to each other.
- They intersect at the poles.

Explain the difference between latitude and longitude in your own words.

Hint: Think about how each is defined and what they measure.

List the four hemispheres of the Earth.

Hint: Consider how the Earth is divided based on latitude and longitude.

1. What is the Northern Hemisphere?

2. What is the Southern Hemisphere?

3. What is the Eastern Hemisphere?

4. What is the Western Hemisphere?

Which of the following coordinates is likely to be in the Southern Hemisphere?

Hint: Look for coordinates with a south latitude value.

- 45° N, 120° W
- 30° S, 60° E
- 10° N, 80° E
- 50° N, 100° W

Part 2: Comprehension and Application

Which line divides the Earth into the Northern and Southern Hemispheres?

Hint: Think about the main line that separates the two halves of the Earth.

- Prime Meridian
- Tropic of Capricorn
- Equator
- Tropic of Cancer

Which of the following statements about the Prime Meridian are correct?

Hint: Consider the location and significance of the Prime Meridian.

- It is located at 0 degrees longitude.
- It divides the Earth into Eastern and Western Hemispheres.
- It is parallel to the Equator.

- It passes through Greenwich, England.

Describe how you would use a map's grid system to find a specific location using latitude and longitude.

Hint: Think about how latitude and longitude lines intersect on a map.

If you are given the coordinates 34° N, 118° W, which city are you likely near?

Hint: Think about major cities located near these coordinates.

- New York
 Los Angeles
 London
 Sydney

Which of the following coordinates would you use to navigate to a location in the Eastern Hemisphere?

Hint: Look for coordinates with an east longitude value.

- 40° N, 74° W
 35° S, 149° E
 51° N, 0° W
 30° N, 31° E

Part 3: Analysis, Evaluation, and Creation

Which of the following best describes the relationship between the Tropic of Cancer and the Tropic of Capricorn?

Hint: Consider their locations and significance in relation to the Earth's tropical zone.

- They are both located at 0 degrees latitude.
 They mark the boundaries of the Earth's tropical zone.

- They are parallel to the Prime Meridian.
- They intersect at the poles.

Analyze the following statements and select those that are true about the Arctic Circle:

Hint: Consider the location and characteristics of the Arctic Circle.

- It is located at approximately 66.5 degrees north latitude.
- It marks the southern boundary of the polar zone.
- It is closer to the Equator than the Tropic of Cancer.
- It experiences 24 hours of daylight at least once a year.

Compare and contrast the significance of the Equator and the Prime Meridian in global navigation.

Hint: Think about how each line is used in navigation and geography.

Which of the following scenarios best illustrates the importance of understanding latitude and longitude in real-world applications?

Hint: Consider practical uses of latitude and longitude in navigation.

- Calculating the distance between two cities using a road map.
- Determining the time zone of a location.
- Navigating a ship across the ocean.
- Planning a road trip itinerary.

Imagine you are designing a treasure hunt that requires participants to use latitude and longitude to find clues. Which of the following elements would you include?

Hint: Think about what tools and information would be necessary for the treasure hunt.

- A map with marked coordinates.
- Clues that require calculating distances between coordinates.
- A compass for direction.
- A list of cities with their coordinates.

Propose a method for teaching young students about latitude and longitude using interactive activities or technology. Explain why your method would be effective.

Hint: Consider engaging ways to teach these concepts.
