What is the mechanism of action of beta-blockers?

Beta-blockers work by blocking the effects of epinephrine (adrenaline) on beta-adrenergic receptors, leading to a decrease in heart rate and blood pressure.

What are the common side effects of ACE inhibitors?

Common side effects of ACE inhibitors include cough, elevated blood potassium levels, low blood pressure, dizziness, and renal impairment.

What is the primary use of statins?

Statins are primarily used to lower cholesterol levels in the blood and reduce the risk of cardiovascular disease.

What is the antidote for opioid overdose?

The antidote for opioid overdose is naloxone (Narcan), which can rapidly reverse the effects of opioids.

What class of drugs is used to treat anxiety disorders?

Anxiolytics, particularly benzodiazepines, are commonly used to treat anxiety disorders.

What is the therapeutic range for lithium?

The therapeutic range for lithium is typically between 0.6 to 1.2 mEq/L.

What are the signs of digoxin toxicity?

Signs of digoxin toxicity include nausea, vomiting, dizziness, confusion, and visual disturbances such as seeing halos.

What is the mechanism of action of SSRIs?

SSRIs (Selective Serotonin Reuptake Inhibitors) work by increasing the levels of serotonin in the brain by inhibiting its reuptake into the presynaptic cell.

What is the primary use of warfarin?

Warfarin is primarily used as an anticoagulant to prevent blood clots.

What are the common side effects of corticosteroids?

Common side effects of corticosteroids include weight gain, increased appetite, mood changes, and increased risk of infections.
