Part 1: Building a Foundation

What is the base unit of length in the metric system?

undefined. A) Inch

undefined. B) Meter ✓

undefined. C) Foot

undefined. D) Yard

The base unit of length in the metric system is the meter.

What is the base unit of length in the metric system?

undefined. A) Inch

undefined. B) Meter ✓

undefined. C) Foot

undefined. D) Yard

The base unit of length in the metric system is the meter.

Which of the following are units of mass in the metric system? (Select all that apply)

undefined. A) Gram ✓

undefined. B) Pound

undefined. C) Kilogram ✓

undefined. D) Ounce

The units of mass in the metric system include grams and kilograms.

Which of the following are units of mass in the metric system? (Select all that apply)

Create hundreds of practice and test experiences based on the latest learning science.

Your AI Tutor for interactive quiz, worksheet and flashcard creation.

undefined. A) Gram ✓

undefined. B) Pound

undefined. C) Kilogram ✓

undefined. D) Ounce

The units of mass in the metric system include grams and kilograms.

Explain the relationship between milliliters and liters in the metric system.

1 liter is equal to 1,000 milliliters.

Explain the relationship between milliliters and liters in the metric system.

There are 1,000 milliliters in a liter.

List the conversion factors for the following:

1. 1 meter = ____ centimeters

100

2. 1 kilogram = ____ grams

1000

3. 1 liter = ____ milliliters

1000

1 meter = 100 centimeters, 1 kilogram = 1000 grams, 1 liter = 1000 milliliters.

Which of the following correctly describes the relationship between kilometers and meters?

undefined. A) 1 kilometer = 100 meters

undefined. B) 1 kilometer = 1,000 meters ✓

undefined. C) 1 kilometer = 10,000 meters

undefined. D) 1 kilometer = 100,000 meters

1 kilometer is equal to 1,000 meters.

Which of the following correctly describes the relationship between kilometers and meters?

undefined. A) 1 kilometer = 100 meters

Create hundreds of practice and test experiences based on the latest learning science.

undefined. B) 1 kilometer = 1,000 meters ✓

undefined. C) 1 kilometer = 10,000 meters

undefined. D) 1 kilometer = 100,000 meters

1 kilometer is equal to 1,000 meters.

Part 2: comprehension and Application

Which of the following statements about metric conversions is true? (Select all that apply)

undefined. A) Metric conversions are based on powers of 10. ✓

undefined. B) Converting between metric units requires complex calculations.

undefined. C) 1 gram is larger than 1 kilogram.

undefined. D) 1 liter is equivalent to 1,000 milliliters. ✓

Metric conversions are based on powers of 10, and 1 liter is equivalent to 1,000 milliliters.

Which of the following statements about metric conversions is true? (Select all that apply)

undefined. A) Metric conversions are based on powers of 10. ✓

undefined. B) Converting between metric units requires complex calculations.

undefined. C) 1 gram is larger than 1 kilogram.

undefined. D) 1 liter is equivalent to 1,000 milliliters. ✓

True statements include that metric conversions are based on powers of 10 and that 1 liter is equivalent to 1,000 milliliters.

Describe how you would convert 500 centimeters to meters using the metric conversion principles.

To convert 500 centimeters to meters, divide by 100, resulting in 5 meters.

Describe how you would convert 500 centimeters to meters using the metric conversion principles.

To convert 500 centimeters to meters, divide by 100.

If you have 2,500 milligrams, how many grams do you have?

Create hundreds of practice and test experiences based on the latest learning science.

undefined. A) 2.5 grams ✓

undefined. B) 25 grams

undefined. C) 250 grams

undefined. D) 0.25 grams

2,500 milligrams is equal to 2.5 grams.

If you have 2,500 milligrams, how many grams do you have?

undefined. A) 2.5 grams ✓

undefined. B) 25 grams

undefined. C) 250 grams

undefined. D) 0.25 grams

2,500 milligrams is equal to 2.5 grams.

You are baking a cake and the recipe calls for 2 liters of milk. You only have a measuring cup marked in milliliters. How many milliliters of milk do you need? (Select all that apply)

undefined. A) 200 mL

undefined. B) 2,000 mL ✓

undefined. C) 20,000 mL

undefined. D) 200,000 mL

You need 2,000 milliliters of milk for the recipe.

You are baking a cake and the recipe calls for 2 liters of milk. You only have a measuring cup marked in milliliters. How many milliliters of milk do you need? (Select all that apply)

undefined. A) 200 mL

undefined. B) 2,000 mL ✓

undefined. C) 20,000 mL

undefined. D) 200,000 mL

You need 2,000 milliliters of milk.

A car travels 150 kilometers. Convert this distance into meters.

150 kilometers is equal to 150,000 meters.

Create hundreds of practice and test experiences based on the latest learning science.

A car travels 150 kilometers. Convert this distance into meters.

150 kilometers is equal to 150,000 meters.

You have a package weighing 1.5 kilograms. How many grams does the package weigh?

undefined. A) 150 grams

undefined. B) 1,500 grams ✓

undefined. C) 15,000 grams

undefined. D) 150,000 grams

1.5 kilograms is equal to 1,500 grams.

You have a package weighing 1.5 kilograms. How many grams does the package weigh?

undefined. A) 150 grams

undefined. B) 1,500 grams ✓

undefined. C) 15,000 grams

undefined. D) 150,000 grams

1.5 kilograms is equal to 1,500 grams.

Part 3: Analysis, Evaluation, and Creation

Analyze the following scenario: You have a container that holds 3 liters of water. If you pour out 750 milliliters, how much water is left in liters? (Select all that apply)

undefined. A) 2.25 liters ✓

undefined. B) 2.75 liters

undefined. C) 3.25 liters

undefined. D) 3.75 liters

After pouring out 750 milliliters, 2.25 liters of water is left.

Analyze the following scenario: You have a container that holds 3 liters of water. If you pour out 750 milliliters, how much water is left in liters? (Select all that apply)

undefined. C) 3.25 liters

undefined. D) 3.75 liters

After pouring out 750 milliliters, 2.25 liters of water is left.

Break down the steps needed to convert 5,000 grams into kilograms and explain your reasoning.

To convert 5,000 grams to kilograms, divide by 1,000, resulting in 5 kilograms.

Break down the steps needed to convert 5,000 grams into kilograms and explain your reasoning.

To convert 5,000 grams to kilograms, divide by 1,000.

Evaluate the following statements and select the correct ones about metric conversions. (Select all that apply)

undefined. A) Converting between metric units is always a simple process.

undefined. B) Understanding conversion factors is essential for accurate conversions. ✓

undefined. C) It is impossible to convert between metric and imperial units.

undefined. D) Metric conversions are useful in scientific calculations. ✓

Correct statements include that understanding conversion factors is essential for accurate conversions and that metric conversions are useful in scientific calculations.

Evaluate the following statements and select the correct ones about metric conversions. (Select all that apply)

undefined. A) Converting between metric units is always a simple process.

undefined. B) Understanding conversion factors is essential for accurate conversions. ✓

undefined. C) It is impossible to convert between metric and imperial units.

undefined. D) Metric conversions are useful in scientific calculations. ✓

Understanding conversion factors is essential for accurate conversions, and metric conversions are useful in scientific calculations.

Provide a detailed problem and solution involving metric conversions.

Create a real-world problem involving metric conversions and provide a detailed solution.

An example could be converting a recipe from grams to kilograms.

Reflect on the importance of metric conversions in daily life. Provide examples in the following areas:

1. Cooking

___

2. Travel

___

3. Science

___

Metric conversions are important in cooking, travel, and science.

Reflect on the importance of metric conversions in daily life. Provide examples in the following areas:

1. Cooking:

Using grams and liters for ingredient measurements.

2. Travel:

Understanding distances in kilometers.

3. Science:

Conduct experiments using metric measurements.

Metric conversions are important in cooking, travel, and science.
