Part 1: Foundational Knowledge

What is the defining characteristic of parallel lines?	
Hint: Think about how parallel lines behave in relation to each other.	
 a) They intersect at a right angle b) They have different slopes c) They do not intersect ✓ d) They form a triangle Parallel lines do not intersect at any point. 	
What is the defining characteristic of parallel lines?	
Hint: Think about how parallel lines behave in relation to each other.	
 a) They intersect at a right angle b) They have different slopes c) They do not intersect ✓ d) They form a triangle 	
Parallel lines do not intersect and have the same slope.	
Which of the following are true about perpendicular lines?	
Hint: Consider the angles formed when two lines intersect.	
 a) They intersect at a 90-degree angle ✓ b) Their slopes are equal c) The product of their slopes is -1 ✓ d) They never intersect 	

P	Perpendicular lines intersect at a right angle and their slopes multiply to -1.
Whi	ch of the following are true about perpendicular lines?
Hint:	Consider the properties of slopes for perpendicular lines.
☐ b) They intersect at a 90-degree angle ✓) Their slopes are equal) The product of their slopes is -1 ✓) They never intersect
P	Perpendicular lines intersect at a right angle and their slopes are negative reciprocals.
Exp	lain the difference between parallel and perpendicular lines in terms of their slopes.
Hint:	Focus on how the slopes relate to each other for both types of lines.
	Parallel lines have the same slope, while perpendicular lines have slopes that are negative eciprocals.
-	lain the difference between parallel and perpendicular lines in terms of their slopes.
Hint:	Think about how the slopes relate to each other.
	Parallel lines have equal slopes, while perpendicular lines have slopes that are negative eciprocals of each other.

Provide the slope-intercept form and standard form of a line equation.	
Hint: Recall the general forms of line equations.	
1. Slope-intercept form:	
y = mx + b	
2. Standard form:	
Ax + By = C	
The slope-intercept form is $y = mx + b$, and the standard form is $Ax + By = C$.	
If two lines have slopes of 3 and -1/3, what is their relationship?	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes.	
Part 2: Understanding Concepts If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes.	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes.	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes. a) Parallel b) Perpendicular ✓ c) Neither d) Cannot be determined	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes. a) Parallel b) Perpendicular ✓ c) Neither d) Cannot be determined The lines are perpendicular because the product of their slopes is -1.	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes. a) Parallel b) Perpendicular ✓ c) Neither d) Cannot be determined The lines are perpendicular because the product of their slopes is -1. If two lines have slopes of 3 and -1/3, what is their relationship?	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes. (a) Parallel (b) Perpendicular ✓ (c) Neither (d) Cannot be determined The lines are perpendicular because the product of their slopes is -1. If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes.	
If two lines have slopes of 3 and -1/3, what is their relationship? Hint: Consider the product of the slopes.	

Describe how you would graphically determine if two lines are parallel or perpendicular.
To determine if lines are parallel, check if they never intersect; for perpendicular, check if they intersect at a right angle.
Hint: Think about the angles and slopes of the lines.
Describe how you would graphically determine if two lines are parallel or perpendicular.
Parallel lines will have identical slopes in their equations.
Hint: Look for lines with the same slope. ☐ a) y = 2x + 3 ✓
Which of the following equations represent parallel lines?
Lines with the same slope are parallel.
□ b) y = 2x - 4 √
Hint: Look for lines with the same slope. ☐ a) y = 2x + 3 ✓
Which of the following equations represent parallel lines?
The lines are perpendicular because the product of their slopes is -1.

Create hundreds of practice and test experiences based on the latest learning science.

Hint: Think about the slopes and angles of the lines.

You can determine the relationship by comparing the slopes and observing the angles at which they intersect.
Part 3: Applying Knowledge
Given the line equation $y = -2x + 5$, which of the following lines is parallel to it?
Hint: Look for a line with the same slope.
A line parallel to $y = -2x + 5$ will have the same slope of -2.
Given the line equation $y = -2x + 5$, which of the following lines is parallel to it?
Hint: Look for a line with the same slope.
ⓐ a) $y = 2x + 1$ ⓑ b) $y = -2x - 3$ ⓒ c) $y = 1/2x + 4$ ⓓ d) $y = 3x - 5$
A line parallel to $y = -2x + 5$ will have the same slope of -2.
Identify the equations of lines that are perpendicular to $y = 1/3x + 2$.
Hint: Look for lines with slopes that are negative reciprocals.
☐ a) $y = -3x + 4$ ✓ ☐ b) $y = 3x - 1$

c) y = -1/3x + 5
\Box d) y = 1/3x - 2
Lines that are perpendicular will have slopes that multiply to -1.
Identify the equations of lines that are perpendicular to $y = 1/3x + 2$.
Hint: Look for lines with slopes that are negative reciprocals.
\Box a) y = -3x + 4 ✓
□ b) y = 3x - 1
c) y = -1/3x + 5
\Box d) y = 1/3x - 2
Perpendicular lines will have slopes that multiply to -1.
Write the equation of a line that passes through the point $(2, 3)$ and is parallel to the line $y = 4x + 1$.
Hint: Use the slope from the given line to find the new line's equation.
The new line will have the same slope as $y = 4x + 1$, which is 4.
Write the equation of a line that passes through the point $(2, 3)$ and is parallel to the line $y = 4x + 1$.
Hint: Use the slope of the given line to find the new line's equation.

The new line will have the same slope as the given line and pass through the specified point.
Part 4: Analyzing Relationships
Analyze and explain why the lines $y = 2x + 5$ and $y = -1/2x + 3$ are perpendicular.
Hint: Consider the slopes of both lines.
The slopes of the lines are negative reciprocals of each other, indicating they are perpendicular.
Analyze and explain why the lines $y = 2x + 5$ and $y = -1/2x + 3$ are perpendicular.
Hint: Focus on the slopes of the lines.
The slopes of the lines are negative reciprocals, indicating they are perpendicular.
Part 5: Synthesis and Reflection
Which statement best evaluates the relationship between the lines $y = 4x + 7$ and $y = -1/4x + 2$?
Hint: Consider the slopes of both lines.
○ a) They are parallel

	○ b) They are perpendicular ✓		
	c) They are coincident		
\cup	d) They are neither parallel nor perpendicular		
	The lines are perpendicular because their slopes are negative reciprocals.		
W	hich statement best evaluates the relationship between the lines $y = 4x + 7$ and $y = -1/4x + 2$?		
Hii	nt: Consider the slopes of both lines.		
\bigcirc	a) They are parallel		
	b) They are perpendicular ✓		
	c) They are coincident		
\bigcirc	d) They are neither parallel nor perpendicular		
	The lines are perpendicular because their slopes are negative reciprocals.		
	solvente the following statements and solvent the southest are two.		
EV	aluate the following statements and select those that are true:		
	ate Canaday that definitions of nevellal and never andiquier lines		
Hii	nt: Consider the definitions of parallel and perpendicular lines.		
Hii	a) Two lines with slopes 0 and undefined are perpendicular ✓		
	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓		
	 a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular 		
	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓		
	 a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular 		
	 a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ 		
	 a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines. 		
 	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines.		
 	 a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines. 		
 	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines. raluate the following statements and select those that are true: nt: Consider the definitions of parallel and perpendicular lines. a) Two lines with slopes 0 and undefined are perpendicular ✓		
 	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines. raluate the following statements and select those that are true: nt: Consider the definitions of parallel and perpendicular lines. a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓		
 	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines. raluate the following statements and select those that are true: nt: Consider the definitions of parallel and perpendicular lines. a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular		
 	a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓ c) Two horizontal lines are perpendicular d) A line with slope 1 is perpendicular to a line with slope -1 ✓ True statements will reflect the properties of parallel and perpendicular lines. raluate the following statements and select those that are true: nt: Consider the definitions of parallel and perpendicular lines. a) Two lines with slopes 0 and undefined are perpendicular ✓ b) Two vertical lines are parallel ✓		

Create a real-world scenario where determining whether two lines are parallel or perpendicular is crucial. Explain how you would solve it using the concepts learned.

Hint: Think about applications in architecture or engineering.
Real-world scenarios often involve determining the relationship between lines in design and construction.
Create a real-world scenario where determining whether two lines are parallel or perpendicular is crucial. Explain how you would solve it using the concepts learned.
Hint: Think about applications in architecture or engineering.
Real-world scenarios often involve determining the relationship between lines in design and construction.
Design a pair of lines that are perpendicular and provide their equations. Explain your reasoning.
Hint: Consider the slopes of the lines.
1. Line 1 equation:
y = 2x + 1
2. Line 2 equation:

$$y = -1/2x + 3$$

Perpendicular lines will have slopes that are negative reciprocals of each other.
