What is the primary function of red blood cells?

The primary function of red blood cells is to transport oxygen from the lungs to the body's tissues and to carry carbon dioxide from the tissues back to the lungs.

What is the normal range for adult heart rate?

The normal range for adult heart rate is typically between 60 to 100 beats per minute.

What does the acronym 'ADLs' stand for in nursing?

ADLs stands for Activities of Daily Living, which include basic self-care tasks such as bathing, dressing, and eating.

What is the purpose of a nursing care plan?

The purpose of a nursing care plan is to outline the patient's needs and the nursing interventions required to meet those needs.

What is the significance of the Glasgow Coma Scale?

The Glasgow Coma Scale is used to assess a patient's level of consciousness and neurological function.

What are the signs of infection?

Signs of infection include redness, swelling, warmth, pain, fever, and pus or discharge.

What is the role of the nurse in medication administration?

The role of the nurse in medication administration includes verifying the medication order, preparing the medication, administering it safely, and monitoring the patient for effects.

What is the difference between a sign and a symptom?

A sign is an objective finding that can be observed or measured, while a symptom is a subjective experience reported by the patient.

What is the purpose of vital signs monitoring?

The purpose of vital signs monitoring is to assess the patient's physiological status and detect any changes that may indicate a medical problem.

What does 'informed consent' mean in healthcare?

Informed consent means that a patient has been provided with all necessary information regarding a procedure or treatment and has agreed to it voluntarily.
