Part 1: Building a Foundation

Which of the following shapes has four equal sides and four right angles?

undefined. A) Rectangle

undefined. C) Square ✓

undefined. D) Pentagon

undefined. C) Triangle

The correct answer is C) Square, as it has four equal sides and four right angles.

Which of the following are three-dimensional shapes?

undefined. A) Cube ✓

undefined. C) Sphere ✓

undefined. D) Triangle

undefined. C) Circle

The correct answers are A) Cube, C) Sphere.

Describe the difference between a rectangle and a square.

A rectangle has opposite sides that are equal and four right angles, while a square has all sides equal and also has four right angles.

List the number of sides and angles for the following shapes:

1. Triangle:

3 sides, 3 angles

2. Hexagon:

6 sides, 6 angles

3. Octagon:

8 sides, 8 angles

A triangle has 3 sides and 3 angles, a hexagon has 6 sides and 6 angles, and an octagon has 8 sides and 8 angles.

Which shape is known for having no sides and no vertices?

undefined. A) Oval

undefined. C) Triangle

undefined. D) Square

undefined. C) Circle ✓

The correct answer is B) Circle, as it has no sides or vertices.

Part 2: Understanding and Interpretation

Which shape can be described as having two parallel sides and two non-parallel sides?

undefined. A) Trapezoid ✓

undefined. C) Square

undefined. D) Pentagon

undefined. C) Rectangle

The correct answer is A) Trapezoid, as it has one pair of parallel sides.

Which of the following shapes have lines of symmetry?

undefined. A) Circle ✓

undefined. C) Triangle ✓

undefined. D) Hexagon ✓

undefined. C) Rectangle ✓

The correct answers are A) Circle, B) Rectangle, C) Triangle, D) Hexagon.

Explain how you can determine if a shape is symmetrical.

A shape is symmetrical if it can be divided into two identical halves that are mirror images of each other.

Part 3: Application and Analysis

If you rotate a square 90 degrees, what shape do you get?

undefined. A) Rectangle

undefined. C) Triangle

undefined. D) Circle

undefined. C) Square ✓

The correct answer is B) Square, as rotating a square does not change its shape.

Which shapes can be found in the following real-world objects?

undefined. A) A basketball (Sphere) ✓

undefined. C) A stop sign (Octagon) ✓

undefined. D) A slice of pizza (Triangle) ✓

undefined. C) A book (Rectangle) ✓

The correct answers are A) A basketball (Sphere), B) A book (Rectangle), C) A stop sign (Octagon), D) A slice of pizza (Triangle).

Describe a scenario where you might need to use knowledge of shapes in a real-world setting.

Knowledge of shapes is useful in architecture, art, and various design fields where understanding geometric properties is essential.

Which of the following statements about a cube is true?

undefined. A) It has 6 faces, all of which are rectangles.

undefined. C) It has 4 faces, all of which are squares.

undefined. D) It has 6 edges and 8 vertices.

undefined. C) It has 8 vertices and 12 edges. ✓

The correct answer is B) It has 8 vertices and 12 edges.

Analyze the properties of a cylinder. Which of the following are true?

undefined. A) It has two circular faces. ✓

undefined. C) It has vertices.

undefined. D) It has edges.

undefined. C) It has one curved surface. ✓

The correct answers are A) It has two circular faces, B) It has one curved surface.

Compare and contrast the properties of a pyramid and a prism.

A pyramid has a polygonal base and triangular faces that meet at a point, while a prism has two parallel bases and rectangular faces connecting them.

Part 4: Evaluation and Creation

Which shape would be most efficient for tilting a floor without gaps?

undefined. A) Circle

undefined. C) Hexagon ✓

undefined. D) Pentagon

undefined. C) Triangle

The correct answer is C) Hexagon, as it can tile a surface without gaps.

Imagine you are designing a new playground. Which shapes would you incorporate for the following features?

undefined. A) Climbing wall (Rectangle) ✓

undefined. C) Merry-go-round (Circle) ✓

undefined. D) Slide (Triangle) ✓

undefined. C) Sandbox (Square) ✓

The correct answers are A) Climbing wall (Rectangle), B) Sandbox (Square), C) Merry-go-round (Circle), D) Slide (Triangle).

Design a simple object using at least three different shapes. Describe the shapes used and their arrangement.

An example could be a house made of a rectangle (base), a triangle (roof), and a circle (window).
