## Part 1: Building a Foundation

| Hint: Think about the temperature at which water turns to ice.  A) 32°C B) 0°C ✓ C) 100°C D) 273.15°C The freezing point of water in Celsius is 0°C.  Which of the following is the freezing point of water in Celsius?  Hint: Think about the temperature at which water freezes. A) 32°C B) 0°C ✓ C) 100°C D) 273.15°C The freezing point of water in Celsius is 0°C.  Which of the following are temperature scales?  Hint: Consider the different ways temperature can be measured. A) Fahrenheit ✓  |   |
|--|---|
| <ul> <li>A) 32°C</li> <li>B) 0°C ✓</li> <li>C) 100°C</li> <li>D) 273.15°C</li> <li>The freezing point of water in Celsius is 0°C.</li> </ul> Which of the following is the freezing point of water in Celsius? Hint: Consider the different ways temperature can be measured. A) Fahrenheit ✓  | Hint: Think about the temperature at which water freezes.         |
| Which of the following are temperature scales?  Hint: Consider the different ways temperature can be measured.  □ A) Fahrenheit ✓  | <ul><li>B) 0°C ✓</li><li>C) 100°C</li></ul>                       |
| Hint: Consider the different ways temperature can be measured.  ☐ A) Fahrenheit ✓  | The freezing point of water in Celsius is 0°C.                    |
| Hint: Consider the different ways temperature can be measured.  ☐ A) Fahrenheit ✓  |   |
| A) Fahrenheit ✓  | Which of the following are temperature scales?                    |
|  | Hint: Consider the different ways temperature can be measured.    |
|  | <ul><li>□ A) Fahrenheit ✓</li><li>□ B) Celsius ✓</li></ul>        |
| □ C) Kelvin ✓ □ D) Newton  |   |

Create hundreds of practice and test experiences based on the latest learning science.

| I  | Fahrenheit, Celsius, and Kelvin are all temperature scales.        |
|----|--|
| W  | hich of the following are temperature scales?                      |
| Hi | nt: Consider the commonly used temperature scales.                 |
|    | A) Fahrenheit ✓  |
|    | B) Celsius ✓   |
|    | C) Kelvin ✓  |
|    | D) Newton  |
|    | Fahrenheit, Celsius, and Kelvin are all temperature scales.        |
|    |  |
| W  | rite the formula for converting Fahrenheit to Celsius.             |
| Hi | nt: Recall the mathematical relationship between these two scales. |
|    |  |
|    | The formula is $C = (F - 32) \times 5/9$ .                         |
| VV | rite the formula for converting Fahrenheit to Celsius.             |
| Hi | nt: Recall the formula used for conversion.                        |
|    |  |
|    | The formula is $C = (F - 32) \times 5/9$ .                         |
| Li | st the boiling point of water in Fahrenheit, Celsius, and Kelvin.  |

Create hundreds of practice and test experiences based on the latest learning science.

| Hint: Think about the temperature at which water boils.                          |
|--|
| 1. Boiling point in Fahrenheit   |
|  |
| 212°F  |
| 2. Boiling point in Celsius  |
| 100°C  |
| 3. Boiling point in Kelvin   |
| 373.15 K   |
| The boiling point of water is 100°C, 212°F, and 373.15 K.                        |
| Part 2: Understanding and Interpretation   |
| If the temperature is 68°F, what is the equivalent in Celsius?                   |
| Hint: Use the conversion formula to find the answer.                             |
| <ul> <li>A) 10°C</li> <li>B) 20°C ✓</li> <li>C) 30°C</li> <li>D) 40°C</li> </ul> |
| 68°F is equivalent to approximately 20°C.  |
| If the temperature is 68°F, what is the equivalent in Celsius?                   |

Create hundreds of practice and test experiences based on the latest learning science.

Hint: Use the conversion formula to find the answer.

| ○ B) 20°C ✓  |
|--|
| ○ C) 30°C  |
| ○ D) 40°C  |
| 68°F is equivalent to approximately 20°C.  |
|  |
| Which of the following statements are true about the Kelvin scale?   |
| Hint: Consider the properties and uses of the Kelvin scale.  |
| <ul> <li>A) It starts at absolute zero. ✓</li> <li>B) It is used in scientific experiments. ✓</li> <li>C) 0 K is equivalent to -273.15°C. ✓</li> <li>D) It is commonly used in weather forecasts.</li> </ul>                 |
| The Kelvin scale starts at absolute zero and is used in scientific contexts.   |
| Which of the following statements are true about the Kelvin scale?   |
| Hint: Consider the properties of the Kelvin scale.   |
| <ul><li>A) It starts at absolute zero. ✓</li><li>B) It is used in scientific experiments. ✓</li></ul>  |
| □ C) 0 K is equivalent to -273.15°C. ✓   |
| D) It is commonly used in weather forecasts.   |
|  |
| The Kelvin scale starts at absolute zero and is used in scientific contexts.   |
|  |
| The Kelvin scale starts at absolute zero and is used in scientific contexts.  Explain why accurate temperature conversion is important in scientific experiments.  Hint: Think about the role of temperature in experiments. |

Create hundreds of practice and test experiences based on the latest learning science.

Accurate temperature conversion is crucial for reproducibility and validity of results.

| Explain why accurate temperature conversion is important in scientific experiments.                |  |  |
|--|--|--|
| Hint: Think about the implications of temperature on experimental results.                         |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
| Accurate temperature conversion is crucial for reproducibility and validity of scientific results. |  |  |
|  |  |  |
|  |  |  |
| Part 3: Application and Analysis   |  |  |
|  |  |  |
| A scientist measures a temperature of 310 K. What is this temperature in Celsius?                  |  |  |
| Hint: Use the conversion formula for Kelvin to Celsius.  |  |  |
| ○ A) 36.85°C ✓   |  |  |
| <ul><li>○ B) 37.85°C</li><li>○ C) 38.85°C</li></ul>  |  |  |
| ○ D) 39.85°C   |  |  |
| 310 K is equivalent to approximately 36.85°C.  |  |  |
| · · · · · · · · · · · · · · · · · · ·  |  |  |
|  |  |  |
| A scientist measures a temperature of 310 K. What is this temperature in Celsius?                  |  |  |
| Hint: Use the conversion formula to find the answer.   |  |  |
| ○ A) 36.85°C ✓   |  |  |
| <ul><li>○ B) 37.85°C</li><li>○ C) 38.85°C</li></ul>  |  |  |
| ○ D) 39.85°C   |  |  |
| 310 K is equivalent to approximately 36.85°C.  |  |  |
|  |  |  |

Create hundreds of practice and test experiences based on the latest learning science.

You are baking a cake, and the recipe requires a temperature of 180°C. Which of the following are

equivalent temperatures in Fahrenheit?

| Hint: Use the conversion formula to find the equivalent Fahrenheit temperatures.   |  |
|--|--|
| A) 356°F ✓   |  |
| □ B) 350°F   |  |
| □ C) 320°F   |  |
| □ D) 212°F   |  |
| 180°C is equivalent to 356°F.  |  |
| You are baking a cake, and the recipe requires a temperature of 180°C. Which of the following are equivalent temperatures in Fahrenheit? |  |
| Hint: Use the conversion formula to find the equivalent temperatures.  |  |
| □ A) 356°F ✓   |  |
| □ B) 350°F   |  |
| □ C) 320°F   |  |
| ☐ D) 212°F   |  |
|  |  |
| 180°C is equivalent to 356°F.  |  |
| 180°C is equivalent to 356°F.  Describe a real-world scenario where converting temperatures between Celsius and Fahrenheit is necessary. |  |
| Describe a real-world scenario where converting temperatures between Celsius and Fahrenheit is   |  |
| Describe a real-world scenario where converting temperatures between Celsius and Fahrenheit is necessary.                                |  |

Create hundreds of practice and test experiences based on the latest learning science.

Hint: Think about situations in daily life or specific industries.

| Converting temperatures is necessary in cooking, weather reporting, and scientific research.   |
|--|
| Analyze the following statements and select those that correctly describe the relationship between Celsius and Kelvin.   |
| Hint: Consider the definitions and properties of both scales.  |
| <ul> <li>A) 1°C is equal to 1 K. ✓</li> <li>B) The difference between freezing and boiling points of water is 100 units in both scales. ✓</li> <li>C) Kelvin is always 273.15 units higher than Celsius. ✓</li> </ul>  |
| <ul> <li>D) Kelvin is a more precise scale than Celsius.</li> <li>1°C is equal to 1 K, and Kelvin is always 273.15 units higher than Celsius.</li> </ul>   |
| Analyze the following statements and select those that correctly describe the relationship between Celsius and Kelvin.   |
| Hint: Consider the properties of both temperature scales.  |
| <ul> <li>A) 1°C is equal to 1 K. ✓</li> <li>B) The difference between freezing and boiling points of water is 100 units in both scales. ✓</li> <li>C) Kelvin is always 273.15 units higher than Celsius. ✓</li> <li>D) Kelvin is a more precise scale than Celsius.</li> </ul> |
| 1°C is equal to 1 K, and the difference between freezing and boiling points is 100 units in both scales.   |

Compare and contrast the Celsius and Fahrenheit scales in terms of their practical applications and historical origins.

Hint: Think about how each scale is used in different regions and contexts.

| Celsius is used globally and is based on the metric system, while Fahrenheit is primarily used in the U.S. and has historical roots in early thermometry. |
|---|
| Compare and contrast the Celsius and Fahrenheit scales in terms of their practical applications and historical origins.                                   |
| Hint: Think about how each scale is used in different contexts.   |
|   |
| Celsius is used in most countries for everyday temperature, while Fahrenheit is primarily used in the United States.                                      |
| Part 4: Evaluation and Creation   |
|   |
| Which temperature scale would be most appropriate for measuring extreme temperatures in space?  |
| Hint: Consider the properties of the temperature scales.  |
| <ul><li>A) Celsius</li><li>B) Fahrenheit</li></ul>  |
| ○ C) Kelvin ✓   |
| O) Rankine  |
| The Kelvin scale is most appropriate for measuring extreme temperatures in space.   |

Create hundreds of practice and test experiences based on the latest learning science.

Which temperature scale would be most appropriate for measuring extreme temperatures in space?

| Hint: Consider the properties of each temperature scale.  |
|---|
| ○ A) Celsius  |
| B) Fahrenheit   |
| ○ C) Kelvin ✓   |
| ○ D) Rankine  |
| The Kelvin scale is most appropriate for measuring extreme temperatures in space.   |
| Evaluate the following scenarios and determine which require precise temperature conversions.   |
| Hint: Think about the implications of temperature accuracy in various fields.   |
| A) Cooking a new recipe.  |
| □ B) Conductin a chemical reaction. ✓   |
| C) Reporting weather forecasts.   |
| □ D) Designing a spacecraft. ✓  |
| Conduct chemical reactions and designing spacecraft require precise temperature conversions.  |
| Evaluate the following scenarios and determine which require precise temperature conversions.   |
| Hint: Think about the importance of accuracy in different contexts.   |
| ☐ A) Cooking a new recipe. ✓  |
| B) Conductin a chemical reaction. ✓   |
| C) Reporting weather forecasts.   |
| □ D) Designing a spacecraft. ✓  |
| Cooking, conducting chemical reactions, and designing spacecraft require precise temperature conversions.   |
| Propose a new temperature scale that could be used for a specific industry or scientific field.<br>Describe its key features and advantages over existing scales. |
| Hint: Think about the needs of a specific field and how a new scale could address them.   |
|   |

Create hundreds of practice and test experiences based on the latest learning science.

|    | A new temperature scale could be designed for specific industrial applications, focusing on precision and ease of use. |
|----|--|
|    | opose a new temperature scale that could be used for a specific industry or scientific field.                          |
| Hi | nt: Think about the needs of a specific industry.  |
|    |  |
|    |  |
|    |  |
|    | A new temperature scale could be designed for the food industry, focusing on cooking precision.                        |
