Part 1: Building a Foundation

Which of the following is a criterion for triangle congruence?

undefined. A) Angle-Angle-Angle (AAA)

undefined. A) Side-Side-Side (SSS) ✓

undefined. C) Side-Angle-Angle (SAA)

undefined. D) Angle-Side-Side (ASS)

The correct answer is B) Side-Side-Side (SSS), as it is a valid criterion for triangle congruence.

Which of the following is a criterion for triangle congruence?

undefined. A) Angle-Angle-Angle (AAA)

undefined. A) Side-Side-Side (SSS) ✓

undefined. C) Side-Angle-Angle (SAA)

undefined. D) Angle-Side-Side (ASS)

The correct answer is B) Side-Side-Side (SSS), as it is a valid criterion for triangle congruence.

Select all the criteria that can be used to prove triangle congruence.

undefined. A) Side-Side-Side (SSS) ✓

undefined. A) Angle-Side-Angle (ASA) ✓

undefined. C) Angle-Angle-Side (AAS) ✓

undefined. D) Angle-Angle-Angle (AAA)

The correct answers are A) Side-Side-Side (SSS), B) Angle-Side-Angle (ASA), and C) Angle-Angle-Side (AAS).

Select all the criteria that can be used to prove triangle congruence.

undefined. **A) Side-Side-Side (SSS) ✓**

undefined. **A) Angle-Side-Angle (ASA) ✓**

undefined. **C) Angle-Angle-Side (AAS) ✓**

undefined. D) Angle-Angle-Angle (AAA)

The correct answers are A) Side-Side-Side (SSS), B) Angle-Side-Angle (ASA), and C) Angle-Angle-Side (AAS).

Explain why the Angle-Angle-Angle (AAA) criterion is not sufficient to prove triangle congruence.

AAA does not guarantee congruence because it only ensures that triangles are similar, not necessarily the same size.

Explain why the Angle-Angle-Angle (AAA) criterion is not sufficient to prove triangle congruence.

AAA does not guarantee congruence because it allows for triangles of different sizes.

List the congruence criteria that involve angles.

1. What is ASA?

Angle-Side-Angle, where two angles and the included side are known.

2. What is AAS?

Angle-Angle-Side, where two angles and a non-included side are known.

3. What is ASS?

Angle-Side-Side, where two sides and a non-included angle are known.

The criteria that involve angles are ASA, AAS, and ASS.

Which congruence criterion is specifically applicable to right triangles?

undefined. A) Side-Side-Side (SSS)

undefined. **A) Hypotenuse-Leg (HL) ✓**

undefined. C) Angle-Side-Angle (ASA)

undefined. D) Side-Angle-Side (SAS)

The correct answer is B) Hypotenuse-Leg (HL), which is specific to right triangles.

Which congruence criterion is specifically applicable to right triangles?

undefined. A) Side-Side-Side (SSS)

undefined. A) Hypotenuse-Leg (HL) ✓

undefined. C) Angle-Side-Angle (ASA)

undefined. D) Side-Angle-Side (SAS)

The correct answer is B) Hypotenuse-Leg (HL), as it is specific to right triangles.

Part 2: Application and Analysis

Given triangles ABC and DEF, if $AB = DE$, $AC = DF$, and $\angle A = \angle D$, which congruence criterion can be used to prove the triangles are congruent?

undefined. A) SSS

undefined. A) SAS

undefined. C) ASA ✓

undefined. D) AAS

The correct answer is C) ASA, as it involves two sides and the included angle.

Given triangles ABC and DEF, if $AB = DE$, $AC = DF$, and $\angle A = \angle D$, which congruence criterion can be used to prove the triangles are congruent?

undefined. A) SSS

undefined. A) SAS

undefined. C) ASA ✓

undefined. D) AAS

The correct answer is C) ASA, as it involves two sides and the included angle.

In a real-world scenario, which of the following can be used to determine if two triangular plots of land are congruent?

undefined. A) Measure all three sides of both triangles. ✓

undefined. A) Measure two sides and the included angle of both triangles. ✓

undefined. C) Measure two angles and a non-included side of both triangles.

undefined. D) Measure two angles and the included side of both triangles.

The correct answers are A) Measure all three sides of both triangles and B) Measure two sides and the included angle of both triangles.

In a real-world scenario, which of the following can be used to determine if two triangular plots of land are congruent?

undefined. A) Measure all three sides of both triangles. ✓

undefined. A) Measure two sides and the included angle of both triangles. ✓

undefined. C) Measure two angles and a non-included side of both triangles.

undefined. D) Measure two angles and the included side of both triangles.

The correct answers are A) Measure all three sides of both triangles and B) Measure two sides and the included angle of both triangles.

Imagine you are designing a triangular garden. Explain how you would use the congruence criteria to ensure that two triangular sections of the garden are identical.

You would use criteria like SSS or ASA to ensure both sections have equal sides and angles.

Imagine you are designing a triangular garden. Explain how you would use the congruence criteria to ensure that two triangular sections of the garden are identical.

You would use criteria like SSS or ASA to ensure the sections are congruent.

Analyze the relationship between the congruence criteria and the properties of congruent triangles. How do these criteria ensure the triangles are identical in shape and size?

The criteria ensure that all corresponding sides and angles are equal, confirming the triangles are identical.

Analyze the relationship between the congruence criteria and the properties of congruent triangles. How do these criteria ensure the triangles are identical in shape and size?

The criteria ensure that all corresponding sides and angles are equal, which guarantees identical shape and size.

Part 3: Evaluation and Creation

Which of the following statements best evaluates the effectiveness of the Side-Side-Side (SSS) criterion in proving triangle congruence?

undefined. A) It is the least effective because it requires measuring all sides.

undefined. A) It is effective because it guarantees all corresponding angles are equal.

undefined. C) It is ineffective because it does not consider angles.

undefined. D) It is effective because it ensures all corresponding sides are equal. ✓

The correct answer is D) It is effective because it ensures all corresponding sides are equal.

Which of the following statements best evaluates the effectiveness of the Side-Side-Side (SSS) criterion in proving triangle congruence?

undefined. A) It is the least effective because it requires measuring all sides.

undefined. A) It is effective because it guarantees all corresponding angles are equal.

undefined. C) It is ineffective because it does not consider angles.

undefined. D) It is effective because it ensures all corresponding sides are equal. ✓

The correct answer is D) It is effective because it ensures all corresponding sides are equal.

Evaluate the following statements about triangle congruence and select the correct ones:

undefined. A) Congruent triangles can be different sizes.

undefined. A) Congruent triangles can be different shapes.

undefined. C) Congruent triangles have the same shape and size. ✓

undefined. D) Congruent triangles have corresponding angles and sides equal. ✓

The correct answers are C) Congruent triangles have the same shape and size and D) Congruent triangles have corresponding angles and sides equal.

Evaluate the following statements about triangle congruence and select the correct ones:

undefined. A) Congruent triangles can be different sizes.

undefined. A) Congruent triangles can be different shapes.

undefined. C) Congruent triangles have the same shape and size. ✓

undefined. D) Congruent triangles have corresponding angles and sides equal. ✓

The correct answers are C) Congruent triangles have the same shape and size and D) Congruent triangles have corresponding angles and sides equal.

Create a real-world problem involving triangle congruence and provide a solution using one of the congruence criteria.

You might describe a situation in construction where two triangular supports need to be congruent, using SSS to prove it.

Create a real-world problem involving triangle congruence and provide a solution using one of the congruence criteria.

You could create a problem involving the design of a triangular roof and use SSS to prove congruence.

Propose two different scenarios where triangle congruence could be used in architectural design. Provide a brief explanation for each scenario.

1. Scenario 1: Roof trusses.

Roof trusses need to be congruent to ensure even weight distribution.

2. Scenario 2: Window frames.

Window frames must be congruent to fit properly and maintain aesthetics.

One scenario could involve roof trusses needing congruent triangular shapes, and another could involve window frames that must match in size and shape.
